Client Reference Data Analyst | Data Management & Governance | SQL | Python | Power BI | CRM Data

PROFESSIONAL SUMMARY

Data Analyst with hands-on experience in data quality validation, MIS reporting, SQL analysis, Python-based data cleaning, Power BI dashboards, and process documentation. Experienced in maintaining structured records, reconciling operational datasets, identifying data gaps, preparing stakeholder reports, and supporting data-driven decision-making. Strong fit for Client Reference Data Management roles involving master data maintenance, CRM/client records, data hierarchies, governance controls, remediation, SOP refinement, UAT support, and cross-functional query resolution.

CORE SKILLS

Client & Reference Data: Client/company record maintenance, master data quality checks, data hierarchy mapping concepts, CRM data handling, duplicate/missing data review

Data Governance & Controls: Data quality validation, reconciliation checks, exception tracking, remediation support, SOP documentation, audit-ready reporting, operational risk awareness

Analytics & Reporting: MIS reporting, KPI dashboards, ad-hoc analysis, stakeholder reporting, PowerPoint summaries, large dataset analysis

SQL & Databases: MySQL, PostgreSQL, SQL Server, SQLite; joins, CTEs, window functions, subqueries, aggregation, query optimisation

Tools: Advanced Excel, Pivot Tables, XLOOKUP, Power Query, Power BI, DAX, Python Pandas, Jupyter Notebook, GitHub, VS Code

Business Skills: Problem solving, attention to detail, written/verbal communication, stakeholder coordination, issue/query handling, documentation discipline

PROFESSIONAL EXPERIENCE

Data Analyst & Computer Instructor - School Reporting and Analytics

Marwari Vidyalaya High School | Mumbai | Aug 2024 - Present

- Maintained and validated structured student, fee, and academic records for 300+ records, ensuring accuracy, consistency, and timely updates for management reporting.
- Performed recurring data quality checks, missing-value correction, duplicate review, and reconciliation of payment/fee records before monthly reporting sign-offs.
- Prepared Excel-based MIS reports and Power BI summaries for stakeholders, converting operational data into clear KPIs, exceptions, and follow-up actions.
- Built a School ERP Fee Analytics System using Python, SQL, and Power BI to track collection status, outstanding dues, defaulters, and student-level data issues.
- Maintained issue trackers and coordinated with school staff to resolve record corrections, reporting queries, and data gaps within defined timelines.
- Documented repeatable reporting steps and data-cleaning rules, supporting process consistency and reducing manual dependency.

SELECTED PROJECTS

School ERP - Fee Performance Analytics Dashboard | Python | SQL | Power BI | Excel

- Processed 560 student records from raw ERP Excel exports into a clean analytics-ready dataset with generated IDs, payment status, outstanding balances, and validation rules.
- Engineered a Python ETL workflow using Pandas to standardise fields, identify missing/inconsistent records, classify exceptions, and load structured data into MySQL.
- Designed a 4-page Power BI dashboard covering Principal Overview, Fee Analysis, Defaulter Analysis, and Student Details with filters and drill-through views.
- Mapped dashboard outputs to operational controls such as collection %, paid amount, outstanding balance, defaulter count, and student-level exception review.

Customer Behavior Analysis Dashboard | Python | PostgreSQL | Power BI | SQL

- Cleaned and transformed a 3,900-record customer dataset using Python, including missing-value handling, column standardisation, segmentation, and feature engineering.
- Wrote 10+ PostgreSQL queries using CTEs and window functions to analyse customer segments, revenue, subscription type, discount impact, and shipping preference.
- Built an interactive Power BI dashboard surfacing KPIs on total customers, average purchase amount, average rating, and category-wise revenue for business review.
- Applied customer-level analysis relevant to CRM/master-data use cases, including segmentation, consistency checks, and stakeholder-friendly reporting.

CRM / Admin Panel Data Management Project | Frontend | Backend | Database | Reporting

- Developed a small CRM/admin-panel style system to capture and manage customer interest records, supporting structured data entry and business tracking workflows.
- Designed database-backed screens for customer and business records, helping stakeholders view, update, and monitor data from a central admin interface.

- Worked with frontend, backend, and database layers, strengthening understanding of CRM records, data ownership, and operational data maintenance.

Swiggy Sales Analytics Dashboard | Excel | Pivot Tables | Data Cleaning | KPI Reporting

- Analysed 197,400+ food delivery orders across 28 cities and 993 restaurants to identify revenue trends, demand patterns, and city-level performance.
- Cleaned and structured raw data by standardising dates, removing duplicates, imputing missing values, and creating Month, Quarter, DayOfWeek, Price Bucket, and Rating Band fields.
- Delivered an automated multi-sheet Excel dashboard with KPI cards, pivot summaries, filters, and presentation-ready outputs for stakeholder review.

EDUCATION

Postgraduate Program - Data Science & Analytics with Gen AI | Imarticus Learning, Mumbai | **Pursuing**

M.Sc. - Information Technology | Guru Nanak Khalsa College, Mumbai | **Graduated 2026**

B.Sc. - Information Technology | Guru Nanak Khalsa College, Mumbai | **Graduated 2024**

CERTIFICATIONS

- Data Analyst Certification - SQL, Excel, Power BI, Python, data cleaning, dashboard development, and business reporting.
- Python Programming Certification - Python programming, Pandas, NumPy, data handling, cleaning, and problem solving.
- Machine Learning Coursework - regression, classification, model evaluation, supervised learning, and basic ML concepts.
